Control and manage with ease.

Bitlogix introduces NetControl 1.0 AV Equipment Control Software

Dallas, Texas, USA, January 5, 2004 - Available now!

NetControl™ 1.0 Advanced Package is a software tool for audiovisual applications to assist in controlling and maintaining projectors and plasma displays over an ordinary TCP/IP network. You can track audiovisual devices on a network using NetControl™ along with TCP/IP network interfaces like the EIKI NPC-1 or SHARP AN-LS1.

A powerful user software interface gives you important information about your AV devices. Many useful control functions are provided through the database driven control manager, event manager, status report manager and the anti-theft control.

NetControl™ 1.0 Advanced Package gives you the ability to do remote maintenance from your computer without seeing the AV device. It is designed to run in 24/7 applications. The unique design of the NetControl™ software allows you to control your equipment from another building, town, country, or continent.

Enjoy the freedom of easy device control through a TCP/IP network. Bitlogix™ NetControl™ is designed for university campuses, government facilities, rental applications or medium to large sized companies with multi-floor and even multi-building presentation applications.

Finally, a powerful cost-effective control and management solution for audiovisual equipment is available. Use the existing TCP/IP network infrastructure to access AV devices. No additional wiring is necessary. NetControl™ 1.0 offers increased flexibility. The software grows with your application demands.

Security concerns are addressed with a powerful 24/7 theft control function with e-mail messaging to regular e-mail accounts or digital cellular phones. NetControl™ 1.0 will generate customized event schedules and status reports for your audiovisual equipment so that you can track lamp life, schedule your projector on/off at specified times, and more.

NetControl™ 1.0 is designed for use with Microsoft® Windows® 2000 and Microsoft® Windows® XP.

Bitlogix Corporation, based in Frisco, Texas develops and markets network management software for audio visual equipment to assist in controlling and maintaining projectors and flat panel displays over a LAN/WAN. Bitlogix's products are designed for the educational, government and corporate market to reduce operating costs and to improve equipment ROI.
