Bitlogix® NetControl® Advanced 1.8 Now Shipping

New software release of NetControl® Advanced control software seamlessly integrates new network projectors into network-based device management.

Dallas, Texas, USA, May 26, 2005 – Bitlogix Software LLC today announced the immediate availability of Bitlogix® NetControl® Advanced 1.8, the latest version of the innovative audiovisual control software for LAN/WAN environments. NetControl includes driver support for the latest network projectors from Eiki, Epson, Hitachi and Sharp and dramatically increases asset management and monitoring capabilities, allowing customers to control projectors and LCD monitors with a real software-based control solution.

The key features of NetControl® Advanced 1.8 are the tight integration of two new Lantronix network interfaces, UDS-10 and UDS100, into the automated search function of NetControl and the new driver support of various network projectors. Bitlogix added support for over 130 new projector models, satisfying the growing customer need for more flexibility. NetControl now supports over 380 different projectors.

NetControl offers a powerful theft control engine that allows customers to monitor connected audiovisual devices. The software sends out e-mail alert messages to digital cell phones, security systems or other first response systems when an alarm is triggered. NetControl also offers an event management system for scheduling management tasks such as a remaining projector lamp time summary

or projector status read. Reports are automatically generated and can be delivered by e-mail. The Control Manager of NetControl gives the user the power to directly control one projector or as many as he wants simultaneously over the network connection. This function is essential for help desk applications and online support requests.

Bitlogix also included an error report module to allow users to report software problems to Bitlogix with just one button click. NetControl 1.8 Advanced is very easy to install, intuitive to manage, and highly reliable.

NetControl Advanced 1.8 builds on Bitlogix's strategy of providing customers freedom of choice for their audiovisual equipment investments and the ability to offer a pure software-based control and automation solution without the need to use cost intensive hardware control systems.

Bitlogix Corporation, based in Frisco, Texas develops and markets network management software for audio visual equipment to assist in controlling and maintaining projectors and flat panel displays over a LAN/WAN. Bitlogix's products are designed for the educational, government and corporate market to reduce operating costs and to improve equipment ROI.
